

Wendt-Delapena Honing Solution continues.....

Based on the overwhelming response for Wendt-Delapena Horizontal range of machines (model E1000S / E2000s) and flexible Hydraulic Vertical machine (model : Powerhone), we are pleased to launch shortly servo based vertical Honing machine E3500S, for honing 3mm to 25mm bore diameters.

This machine will be launched by Nov'13 and have In-built Post Process gauging and Rotary Table as optional.

Salient Features:

- Adjustable tool expansion and stroking speeds through servo drive
- Variable spindle speed
- Siemens control system
- Precise & repeatable honing of through & blind bores.
- Accurate positioning of stroking movement
- Optional rotary indexing table.

Specifications:

Parameters	Unit	E3500
Diameter range of job	mm	3-25
Stroke length	mm	2-350 with 0.1mm increments
Stroking speed (Adjustable)	m/min	1-25
Spindle speed (Adjustable)	rpm	150-3500

We look forward to your valued enquiries and visit to our works, for showcasing machine with standard test piece in working condition.

We invite you to send some parts for our study & conducting trials, which we will be pleased to take up on priority.

Yours faithfully,
For Wendt (India) Limited,
